DETAILED ACTION

Claim Interpretation

1. Instant claim 1 states “an aluminum alloy consisting essentially of Zn, Mg, Er as the main alloying elements”. The examiner interprets this language as an aluminum alloy consisting essentially of Zn, Mg, Er, and incidental impurities. If this interpretation is not consistent with applicant’s intended interpretation, please clarify (including where said interpretation is found in the original specification) in response to this action. Otherwise, it is unclear which ‘minor’ alloying elements to add, and in what amount. ‘Incidental impurities’ have an understood meaning in the art.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Higashi et al (US 4,713,216).

Higashi teaches an Al-Zn-Mg alloy with added rare earth such as Er (column 2 line 32), which is effective to enhance the strength of said alloy. Higashi teaches 4-12% Zn, 0.3-5.0% Mg, and 0.5-10.0% rare earth (see abstract), which substantially overlaps the presently claimed alloying ranges.

Art Unit: 1742

It would have been obvious to select Er from the markush group of rare earth elements taught by Higashi because Higashi teaches at column 2 lines 40-42 that said rare earth elements are recognized equivalents (see MPEP 2144.06).

Overlapping ranges have been held to be a prima facie case of obviousness, see MPEP § 2144.05. It would have been obvious to one of ordinary skill in the art to select any portion of the range, including the claimed range, from the broader range disclosed in the prior art, because the prior art finds that said composition in the entire disclosed range has a suitable utility. Because Higashi teaches a substantially overlapping alloy composition, it is held that Higashi has created a prima facie case of obviousness of the presently claimed invention.
